

## Lab 1\_1 [10 points] HTML Basics

### Objectives

- Build a simple web page
- Use description lists, unordered lists, and ordered lists.
- Insert hyperlinks to text.

### What to do

[10 points] Create a html web page. Use a code editor or an IDE to create a web page that briefly introduce yourself. Save the page as index.html.

- [1 point] Name the title of the web page as YourName's Home Page. Replace YourName with your name.
- [1 point] Add an appropriate heading to your page.
- [1 point] Use a short paragraph to give a brief introduction about yourself.
- [2 points] Use an unordered list to list all the courses you are currently taking. Add an appropriate heading to the course list.
- [2 points] Use an ordered list to list your favourite websites. Insert a correct hyperlink to each website. Add an appropriate heading to the list.
- [1 point] Set the background color of the web page to be orange by using style element in the head section.
- [1 point] Make sure you code is properly indented.
- [1 point] Test your web page using a web browser and validate your code before submission. Make sure your code is validated by the validator.

### Submission:

Create a folder that contains the index.html. **Zip** the folder and submit to Brightspace.
